

# ANALOG TELEPHONY CARDS

Digium® analog cards were created for connecting analog telephones and analog POTS lines through a PC. Using one of our analog cards in concert with Digium's Asterisk® software, standard PC platforms, and the Linux® OS, one can create telephony environments capable of satisfying the needs of business applications with industry-leading quality.

The analog cards, with their interchangeable single and quad FXS and FXO modules, can eliminate the requirement for separate channel banks or access gateways. Digium's commercial, toll-quality High Performance Echo Cancellation (HPEC) software is available to our analog customers at no additional cost. The optional VPMADT032 hardware echo cancellation module provides the same toll-quality as HPEC, but without the performance impact of a software based solution. Scaling of an analog card solution is accomplished by adding additional cards.

Digium's analog cards utilize patent pending VoiceBus™ technology. VoiceBus technology allows these cards to use an industry standard, bus-mastering interface as found in millions of PCs worldwide. VoiceBus maximizes system compatibility and prevents system conflicts.

## 4 Port Analog

- 4 Ports for connecting analog telephones or POTS lines
- Half-length Analog Card
- Up to 4 FXS or FXO Modules
- High Performance Echo Cancellation (HPEC) Software (Optional)
- TDM410 for use with a PCI 2.2 compliant slot - Bundled with VPMADT032 as TDM410PE
- AEX410 for use with a PCI-express 1.0 compliant slot - Bundled with VPMADT032 as AEX410PE

## 8 Port Analog

- 8 RJ-11 interfaces on a single PCI bracket
- 8 Ports for connecting analog telephones or POTS lines
- Half-length Analog Card
- Up to 4 Single FXS or FXO Modules, or 2 Quad FXS or FXO Modules
- High Performance Echo Cancellation (HPEC) Software (Optional)
- VoiceBus™ technology
- TDM800 for use with a PCI 2.2 compliant slot - Bundled with VPMADT032 as TDM800E
- AEX800 for use with a PCI-express 1.0 compliant slot - Bundled with VPMADT032 as AEX800E

## 24 Port Analog

- Up to 24 Ports through a combination of FXS and FXO modules
- Full-length Analog Card
- Up to 6 Quad FXS or FXO Modules
- RJ21X Connector
- High Performance Echo Cancellation (HPEC) Software (Optional)
- VoiceBus™ technology
- TDM2400 for use with a PCI 2.2 compliant slot - Bundled with VPMADT032 as TDM2400E
- AEX2400 for use with a PCI-express 1.0 compliant slot - Bundled with VPMADT032 as AEX2400E

### Target Applications

- Channel Bank Replacement / Alternative
- Small Office Home Office (SOHO) applications
- Small and Medium Business (SMB) applications
- Gateway Termination to analog telephones and lines

### Services and Features

- Caller ID and Call Waiting Caller ID
- ADSI Telephones
- Loopstart Signaling Support

## DIGIUM®

Digium® is the creator and primary developer of Asterisk®, the industry's first Open Source telephony platform.

### ABOUT DIGIUM®

Digium, Inc., the Asterisk company, is the original creator and primary developer of Asterisk, the industry's first open source telephony platform. Digium provides hardware and software products, including AsteriskNOW™, the complete open source software appliance; Asterisk Business Edition™, the professional-grade version of Asterisk; the Asterisk Appliance™, a hardware-based telephony solution; and Switchvox™, turnkey communication solutions for business. Digium also offers a full range of professional services, including consulting, training, technical support and custom software development.

Used in combination with Digium's telephony interface cards, Asterisk offers a strategic, highly cost-effective approach to voice and data transport over IP, TDM, and circuit switched architectures. Digium's suite of products include VoIP, conferencing, voicemail, IP PBX, IVR, automated attendant, media servers, gateways, and application servers.

### ABOUT ASTERISK®

Code for Asterisk, originally written by Mark Spencer of Digium, Inc., has been contributed to by open source software engineers around the world. Currently boasting over four million downloads, Asterisk supports a wide range of protocols for the handling and transmission of voice including packet protocols such as SIP and IAX among others. It supports U.S. and international standard signaling formats used in business phone systems, allowing it to bridge between next-generation voice-data integrated networks and existing infrastructure.
